CHAPTER 1

INTRODUCTION

This project is about the analytics for hospital health care data using data analytics. Data Analytics is the process of examining data sets in order to find trends and draw conclusions about the information they contain. The data analytics is done with the specialized systems and soft ware. Data analytics technologies and techniques are widely used in commercial industries to enable organizations to make more informational business decisions.

1.1 PROJECT OVERVIEW

Recent Covid-19 pandemic has raised alarms over one of the most overlooked areas to focus

Example: Health care Management

While health care management has various use cases for using data science, patient length of stay is one critical parameter to observe and predict if one wants to improve the efficiency of health care management in a hospital.

This parameter helps hospitals to identify patients of high LOS risk (patients who stay longer) at the time of admission. Once identified, patients with high LOS risk can have their treatment plan optimized to minimize LOS and lower the chance of staff/visitors infection.

Also, prior knowledge of LOS can aid in logistics such as room and bed allocation planning.

Suppose you have been hired as Data Scientist of Health Man -not for profit organization dedicated to manage the functioning of hospitals in a professional and optimal manner.

1.2 PURPOSE

Data analytics in health care is vital. It helps health care organizations to evaluate and develop practitioners, detect anomalies in scans and predict outbreaks in illness, per the Harvard Business School. Data Analytics can also lower costs for health care organizations and boost business intelligence. Hospital data analytics can look over patient data and any prescribed medication to alert doctors and patients of incorrect dosages or wrong prescriptions, which lessens human error and the cost to your hospital. This in turn helps in gaining better insights and also enables healthcare practitioners to make well-informed decisions.

CHAPTER 2

LITERATURE SURVEY

The main aim of this paper is to provide a deep analytics on the research field of healthcare data analytics. This is analyzing the previous studies and works in this research area, as well as highlighting some of the guidelines and gaps. This study has used seven popular databases and selected most relevant papers, in order to conduct this paper. The paper has listed some of the data analytics tools and techniques that have been used to improve healthcare performance in many areas.

such as medical operators ,decision making reports ,predction and prevention system. Moreover, the systematic review has showed an interesting demo graphic of fields of publication ,research approaches,as well as outlined some of the possible reasons and issues associate with health care data anlytics ,based on geographical distribution theme[1].

This paper deals with advanced analytical methods to focus on healthcare. This includes the clinical prediction models ,temporal data mining methods,and visual anlytics . Integrating hetrogeneous data such as clinical and geonomic data is essential for improving retrivel techniques that can enhance the quality of biomedical search will be presented . Data publishing techniques that can enhance the quality of biomedical search will be presented. Data privacy is an extreamely important concern in healthcare . Privacypreserving data techniques will therefore be presented [2].

One of the promises of growing critical mass of clinical data accumulating in electronic health reccord(EHR) system is secondary use or it may be reuse of data for other purpose ,such as quality improvement and clinical research .(1)The growthofsuch data has increased dramatically in recent years due to incentives for EHRadoption in the US funded by the Health Information Technology for EconomicandClinical Health (HITECH) Act (2). In the meantime, there has also seen substantial growth in other kinds of health-related data, most notably through effortstosequence genomes and other biological structures and functions(3). The analysisofthis data is usually called analytics (or data analytics). This chapter will definetheterminology of this field, provide an overview of its promise, describe what workhas been accomplished, and list the challenges and opportunities going forward[3].

Clinicians, healthcare providers-suppliers, policy makers and patientsareexperiencing exciting opportunities in light of new information deriving fromtheanalysis of big data sets, a capability that has emerged in the last decades. Duetothe rapid increase of publications in the healthcare industry, we have conductedastructured review regarding healthcare big data analytics. With referencetotheresource-based view theory we focus on how big data resources are utilizedtocreate organization values/capabilities, and through content analysis of the selectedpublications we discuss: the classification of big data types related to healthcare, the associate analysis techniques, the created value for stakeholders, the platformsand tools for handling big health data and future aspects in the field. We present anumber of pragmatic examples to show how the advances in healthcare weremadepossible. We believe that the findings of this review are stimulating andprovidevaluable information to practitioners, policy makers and researchers whilepresenting them with certain paths for future research[4].

In this modern techno-world, the term data is unavoidable and certainly, nothing is possible without its usage. The trends about how to analyze the data are the need of the hour. Data analytics is becoming a future escalating tool of all industries including medicine, robotics, etc. This article briefly explains how data analytics is used in healthcare systems. Health care is the process of maintaining and improving the health of an individual by preventing, diagnosing and treating the diseases, illness and other physical and mental imbalances in people. Data analytics is classified into four types and they are descriptive, diagnostic, predictive and prescriptive analysis. Health care makes use of prescriptive analysis to arrive at the best results and make better decisions. Big data plays a major role in data analytics. It helps the data analysts to collect data from the patients and store them efficiently. After the completion of this whole article, the reader will be able to get the collective idea about health care analytics.[5]

2.1 EXISTING SYSTEM

- ◆ The already existing model is trained with minimal parameters
- ◆ Low accuracy in prediction
- ◆ No feature extraction done
- ◆ High complexity

2.3 PROBLEM STATEMENT AND DEFINITION

- ❖ The aim is to accurately predict the Length of Stay for each patient on a case by case basis so that the Hospitals can use this information for optimal resource allocation and better functioning.
- ❖ The length of stay is divided into 11 different classes ranging from 0-10 days to more than 100 days

CHAPTER 3

IDEATION & PROPOSED SOLUTION

3.1 EMPATHY MAP CANVAS

3.2 IDEATION & BRAINSTORMING

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- 10 minutes to prepare
- 1 hour to collaborate
- 3 people recommended

4

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

- 10 minutes

15

Warm-up exercise

Before your shared brainstorm, it's a good idea to warm up your minds with a quick exercise.

15

Set the goal

Write down the problem you're looking to solve in the first section of the template.

15

Know how to use the feedback loop

Use the feedback loop to get a better idea of what's working and what's not.

Open a new page

1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

- 10 minutes

20

Key notes of brainstorming

To use an example, see production session.

- 10 minutes to prepare
- 1 hour to collaborate
- 3 people recommended

10 minutes to prepare

Need some inspiration?

Use a feedback loop to get a better idea of what's working and what's not.

Open a new page

2

Brainstorm

Share your early ideas that come to mind to address your problem statement.

15 minutes

3

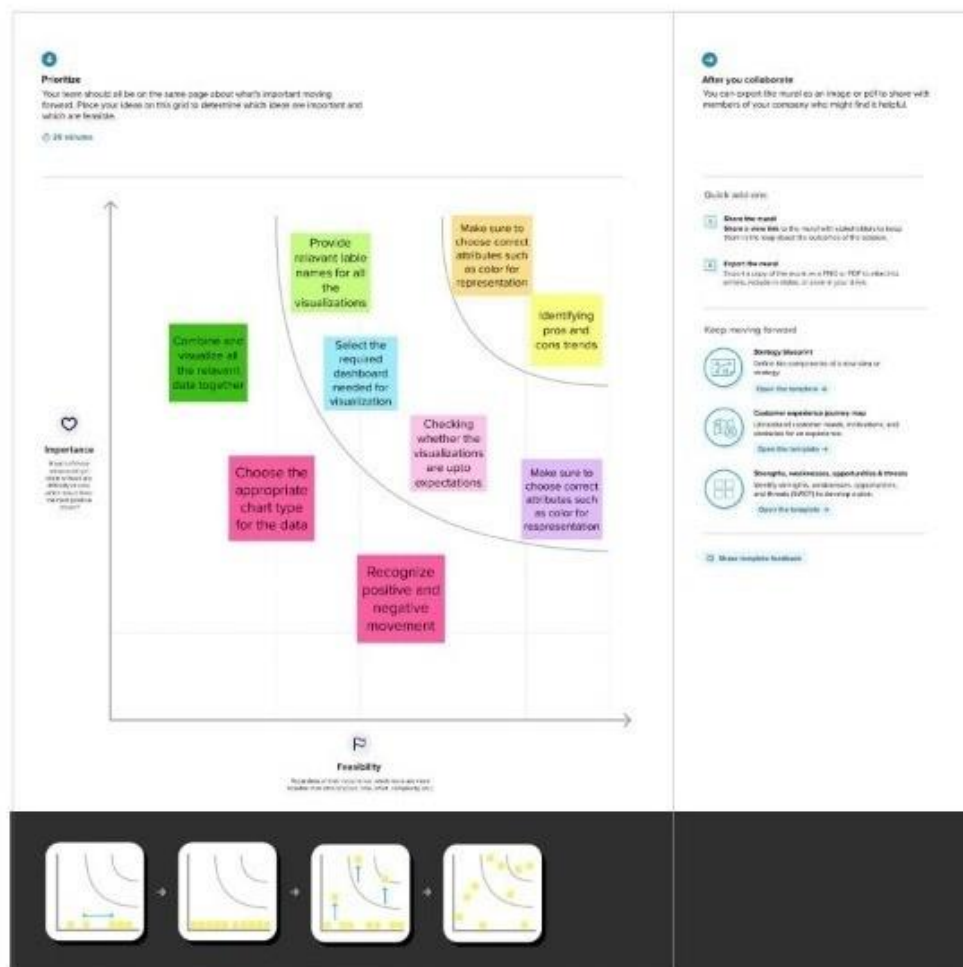

Group ideas

Take turns sharing your ideas while discussing similar or related ideas as you go. In the last 10 minutes, give each member a window to elaborate. If a leader is going from one idea to the next, try and see if you can build it up into another sub-point.

10 minutes

VISUALIZATION

3.3 PROPOSED SOLUTION

Predicting the length of stay of patients.

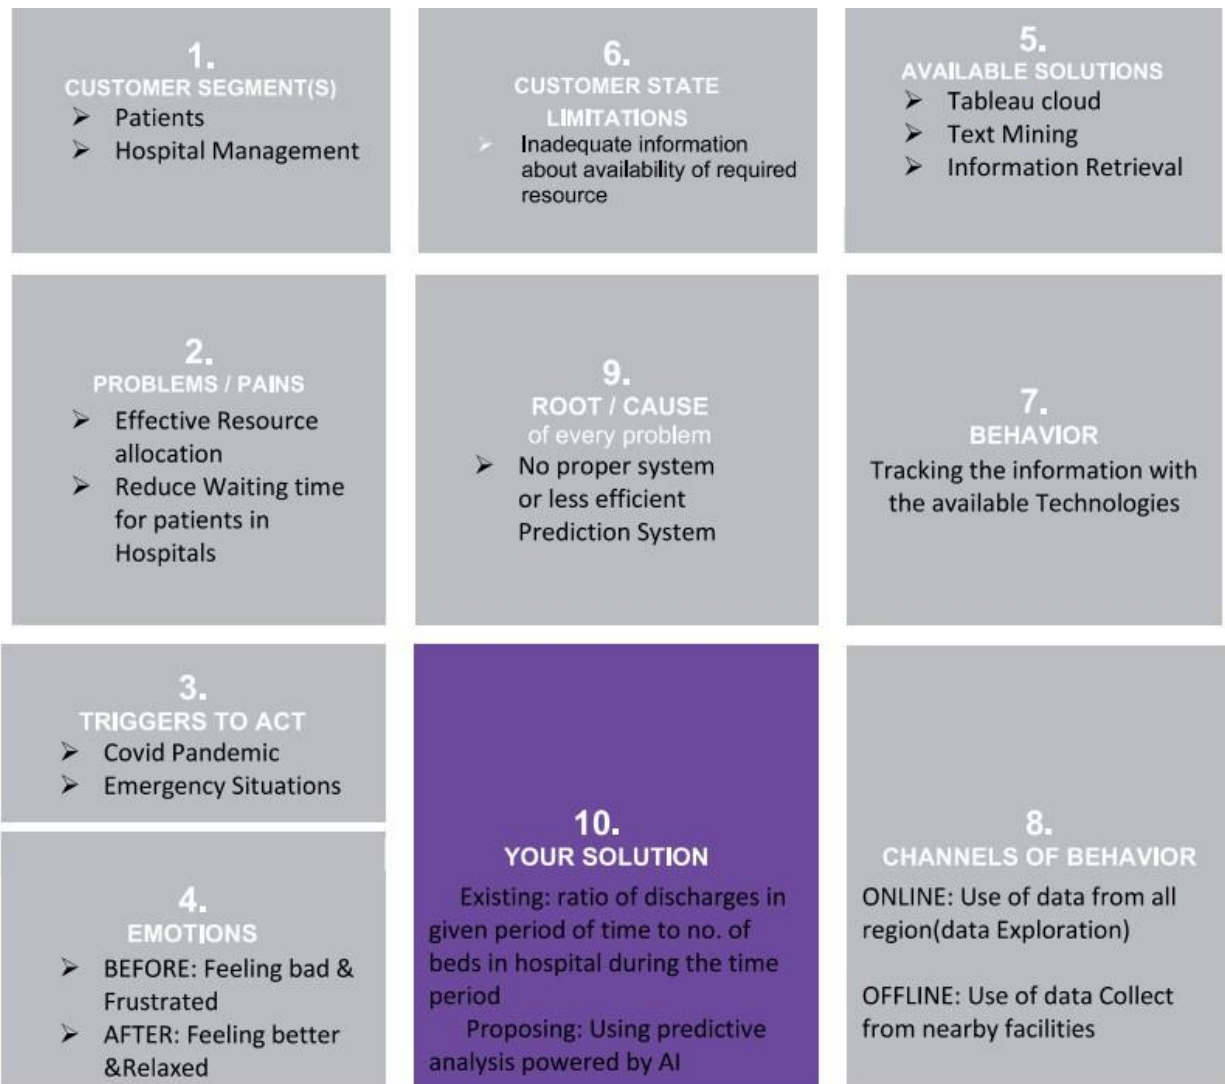

The length of the stay can be predicted using either Randomforest orDecision Tree for more accuracy. Certain parameters like age, stageof thediseases, disease diagnosis, severity of

illness, type of admission, facilities allocated, etc., are used for prediction. IBM Cognos will be used for data analytics.

The model will be trained using colab. It predicts the length of stay (LOS) of the patients with more accuracy. As a result proper resources and therapy can be provided. Patients can get proper treatment and better medical care than before which helps them for their faster recovery. So the prediction minimizes the overflow of patients and helps in resource management and optimizes their resource utilization. Hence this leads to faster recovery and lower the expenses for treatment. It improves the trust in hospital management.

It avoids the major risk of spreading infection among the hospital staff. This leads to overall safety of hospital staff and patients. Resource consumption is optimized. This model can be used by all government hospitals, private hospitals, and this model is also trained with the real world hospital survey for better prediction small clinics. Length of the stay will be predicted with more accuracy. This model predicts the length of the stay for all kinds of patients and predicts with more accuracy

3.4 PROBLEM SOLUTION

CHAPTER 4

REQUIREMENT ANALYSIS

4.1 FUNCTIONAL REQUIREMENT

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Collect data	Data from various sources are collected using different methods in order to provide optimized results.
FR-2	Data Cleaning and Wrangling	When combining multiple data sources, there are many opportunities for data to be duplicated or mislabeled hence we cleanse the data
FR-3	Creating data model	The process of analyzing and defining all the data, as well as the relationships between those bits of data comes under this.
FR-4	Prediction and Analysis	The hidden trends are analyzed and the final results are predicted using machine learning and AI algorithms.

4.2 NON FUNCTIONAL REQUIREMENT

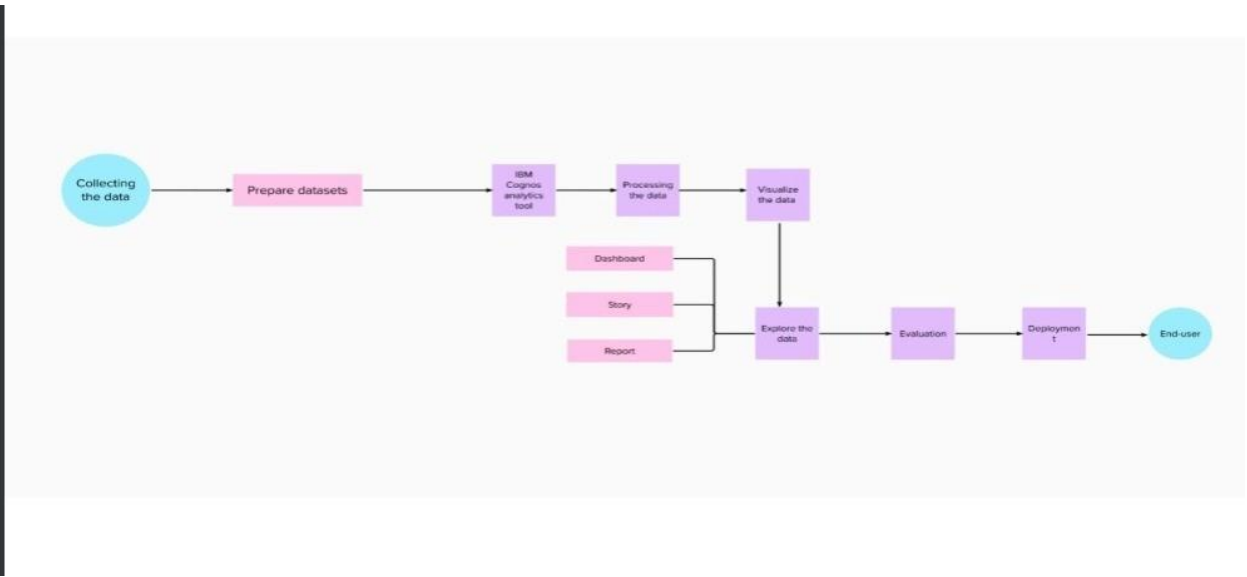

FR No	Non-Functional Requirement	Description
-------	----------------------------	-------------

NFR-1	Usability	The project must be easy to use. The user needs to have a good experience while working with the interface.
NFR-2	Security	Every user can access the website only if they possess the password. The database is secured with encryption techniques which provides high levels of security.
NFR-3	Reliability	The project must have minimal degree of failure under normal usage and how often does the user get access to this work.
NFR-4	Performance	The project must respond quickly to the user's actions or even if the user has to wait the waiting period must be short.
NFR-5	Availability	The project is platform independent. It runs perfectly on almost every platform.
NFR-6	Scalability	The project allows multiple users to handle the data at the same time. It is highly scalable since adding features and making advancements in the website is uncomplicated.

CHAPTER 5

PROJECT DESIGN

5.1 DATA FLOW DIAGRAMS

5.2 SOLUTION & TECHNICAL ARCHITECTURE

SYSTEM ARCHITECTURE:

ETL PROCESS (DATA INTEGRATION PROCESS):

5.3 USER STORIES

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Web user)		USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Gmail	I can register & access the dashboard	Medium	Sprint-1
	Login	USN-4	As a user, I can log into the application by entering email & password	I can access the dashboard	High	Sprint-1
	Dashboard	USN-5	As a user, I can upload the datasets to the dashboard	I can access various operations	High	Sprint-1
	View	USN-6	As a user, I can view the patient details	I can view the visual data and the result after the prediction	High	Sprint-2
Admin	Analyse	USN-7	As an admin, I will analyse the given dataset	I can analyse the dataset	High	Sprint-2
	Predict	USN-8	As an admin, I will predict the length of stay	I can predict the length of stay	High	Sprint-2

CHAPTER 6

PROJECT PLANNING & SCHEDULING

6.1 SPRINT PLANNING & ESTIMATION

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a health care provider I can create account in IBM cloud and the data are collected.	20	High	Geetha K Midhula R
Sprint-2	Analyze	USN-2	As a health care provider all the data that are collected is cleaned and uploaded in the database or IBM cloud.	20	Medium	Naga grishma K Guduru pavani
Sprint-3	Dashboard	USN-3	As a health care provider I can use my account in my dashboard for uploading dataset.	10	Medium	Midhula R Guduru pavani
Sprint-3	Visualization	USN-4	As a health care provider I can prepare data for Visualization.	10	High	Midhula R Naga grishma K
Sprint-4	Visualization	USN-5	As a health care provider I can present data in my dashboard.	10	High	Geetha K Naga grishma K
Sprint-4	Prediction	USN-6	As a health care provider I can predict the length of stay	10	High	Geetha K Guduru pavani

6.2 SPRINT DELIVERY SCHEDULE

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date(Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

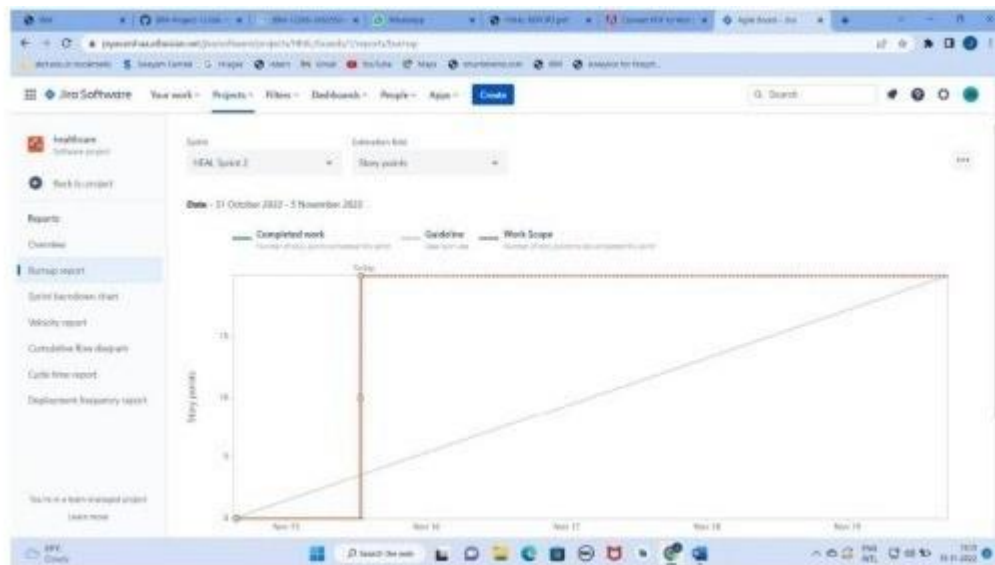

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

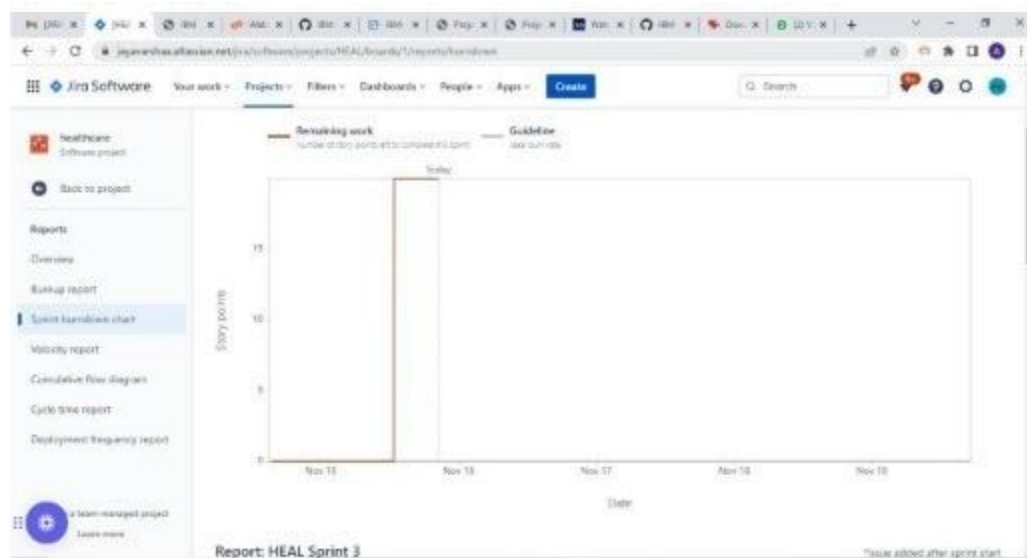

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

6.3 REPORTS FROM JIRA

Burnup chart

Burn down chart

CHAPTER 7

CODING & SOLUTIONING

7.1 FEATURE 1

- Fetched the data from DB2 database.
- Creating responsive dashboard.
- Inserting filter for each chart
- Creating report
- Created reports using multiple graphs and charts

7.2 FEATURE 2

- Creating stories and performed.
- Perform animation render image from website.
- Included graphs and charts.
- Creating web application using bootstrap.
- Embedded the cognos with web application.

7.3 Database Schema

- case_id
- Hospital_code
- Hospital_type_code
- City_Code_Hospital
- Hospital_region_code
- Available Extra Rooms in Hospital
- Department
- Ward_Type
- Ward_Facility_Code
- Bed Grade
- Patient id
- City_Code_Patient ● Type of Admission
- Severity of Illness
- Visitors with Patient

CHAPTER 8

- Age
- Admission_Deposit
- Stay

TESTING 8.1 Test Cases

- ◇ Verify user is able to see Home page.
- ◇ Verify user is able to see Dashboard page.
- ◇ Verify user is able to navigate to Report page.
- ◇ Verify user is able to navigate to story page.
- ◇ Verify filters are working

8.2 User Acceptance Testing

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the [ProductName] project at the time of the release to User Acceptance Testing (UAT).

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	8	5	0	3	16
Duplicate	1	0	5	0	6
External	0	3	2	1	6
Fixed	13	4	3	16	36
Not Reproduced	0	1	0	0	1
Skipped	0	1	0	1	2
Won't Fix	1	4	2	1	8
Totals	23	18	12	22	75

3. Test Case Analysis

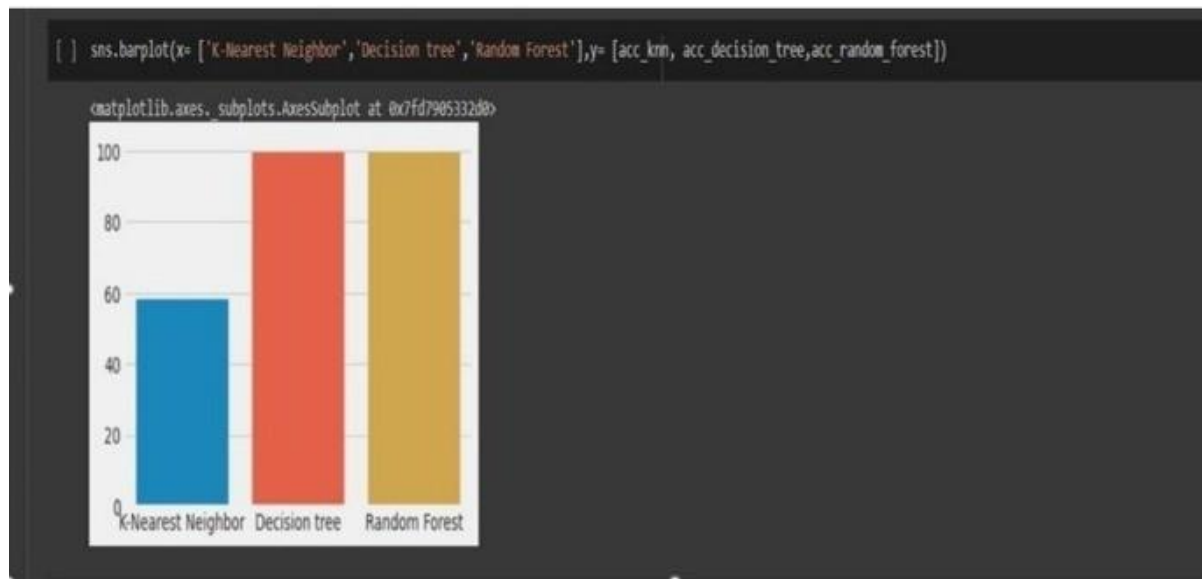

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	9	0	0	9
Client Application	43	0	0	43
Security	1	0	0	1
Outsource Shipping	1	0	0	1

CHAPTER 9

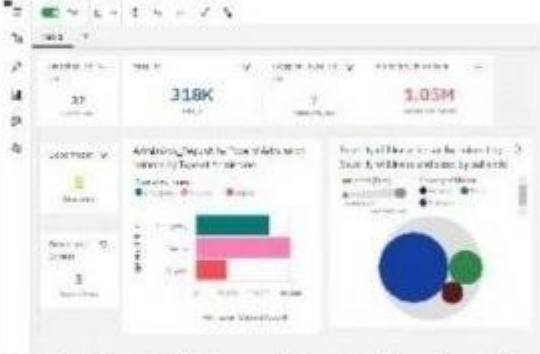

RESULTS

9.1 PERFORMANCE METRICS

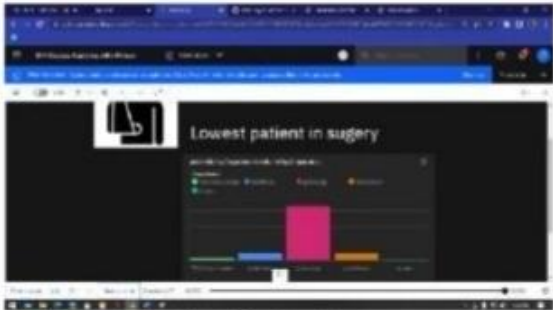

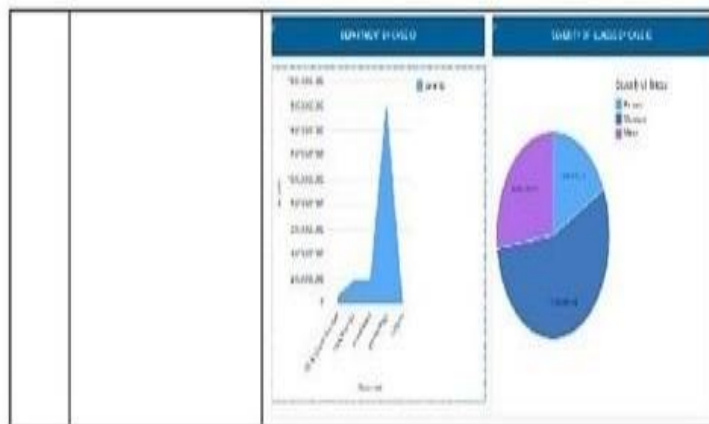

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot/Values
1.	Dashboard design	<p>Number of Visualizations / Graphs – 22 Number of tabs – 9</p>  <p>The screenshot shows a dashboard with a top navigation bar, a left sidebar with filters, and a main content area with several charts. Key metrics displayed include '318K' and '1.05M'. The charts include a horizontal bar chart, a pie chart, and a circular gauge.</p>
2.	Data Responsiveness	<p>Data's will dynamically changed and graph also changed.</p>  <p>The screenshot shows a dashboard with a large pie chart and a bar chart. The data is dynamic, and the graphs are updated in real-time. The interface includes a top navigation bar and a left sidebar with filters.</p>

3.	Amount Data To Rendered (DB2 Metrics)	<p>Number of rows read – 318438 Number of rows loaded – 318438 Number of rows rejected – 0</p>  <p>The screenshot shows a dashboard with a large pie chart and a bar chart. The data is dynamic, and the graphs are updated in real-time. The interface includes a top navigation bar and a left sidebar with filters.</p>
----	---------------------------------------	--

4.	Utilization of Data Filters	<p>We created filters for Dashboards which is perfectly working.</p> 
5.	Effective User Story	<p>Number of Scene Added – 7 Animations are perfectly displayed. Images are perfectly rendered.</p> 
6.	Descriptive Reports	Number of Visualizations / Graphs – 6

CHAPTER 10

ADVANTAGES AND DISADVANTAGES

ADVANTAGES

- ◇ Cost-effective use of technology
- ◇
- ◇ Improved project management
- ◇
- ◇ Sustaining the improvements in the result
- ◇
- ◇ Boosting hospital capacity
- ◇
- ◇ Enhance the quality and efficiency of healthcare
- ◇
- ◇ benefit areas like emergency preparation, charting, administration, compliance, and financial management.
- ◇
- ◇ Analysing clinical data to improve medical research
- ◇
- ◇ Using patient data to improve health outcomes
- ◇
- ◇ Gaining operational insights from healthcare provider data
- ◇
- ◇ Improved staffing through health business management analytics
- ◇
- ◇ Early detection of disease.
- ◇
- ◇ Prevention of unnecessary doctor's visits.
- ◇
- ◇

- ◇ Discovery of new drugs.
- ◇ More accurate calculation of health insurance rates.
- ◇ More effective sharing of patient data

DISADVANTAGES

- ◇ Privacy
- ◇ Replacing Doctors
- ◇ Frustration with poor implementation.
- ◇ Cybersecurity risks
- ◇ Healthcare Regulatory Changes.
- ◇ Healthcare Staffing Shortages

CHAPTER 11 CONCLUSION

The impact of data analytics in healthcare has already made a substantial difference in the ability of healthcare providers to offer patients high-quality care in an efficient, cost-effective manner.

However, the role of data analytics in improving patient outcomes and healthcare processes continues to grow and expand as more types of data become available and new tools are developed that make the results of the analytics clear and easy for healthcare professionals to access.

Realizing the potential of data analytics to transform the healthcare industry begins by understanding how the technology can be applied to address healthcare providers' challenges, including staff recruitment and utilization, operational efficiencies, and enhanced patient experiences. Patient-centered healthcare depends on knowing what patients want and need. Data analytics holds the key to unlocking this vital information.

CHAPTER 12 FUTURE SCOPE

Artificial Intelligence (AI) will play a significant role in data analytics in healthcare for the next decade. For example, the field of AI-enabled clinical decision support is just emerging.

This type of support can compare patients who fit similar profiles within a system, then it can alert doctors to trends in data that may have been overlooked. The use of big data in healthcare will include testing for drug interactions that small studies are unlikely to catch and prevent patients from taking harmful drug combinations.

Decisions made by physicians, like what test or treatments to give a particular patient, make up 80-90% of all healthcare spending, so using artificial intelligence to make more educated decisions will bring down healthcare costs. It's crucial to have informed leaders at the vanguard of these innovations in healthcare.

Data Preprocessing & Feature Engineering

'The following features may have relevance with the Length of Stay of a patient'

Department: It Relates to the type of disease. Hence it will have impact on the length of stay of the patients

Type of Admission: It Relates to patients' reason of admission to the hospital and definitely it will have impact on length of stay of the patients

Severity of Illness: It Relates to the curability of disease

Age: Relates to the curability of diseaseThe following features may have relevance with the Length of Stay of a patient

Department: It Relates to the type of disease. Hence it will have impact on the length of stay of the patients

Type of Admission: It Relates to patients' reason of admission to the hospital and definitely it will have impact on length of stay of the patients

Severity of Illness: It Relates to the curability of disease

Age: Relates to the curability of disease

Ward_Type: Relates to the curability of disease

\

'The following features doesn't have relevance with the Length Of Stay(LOS) of Patients'

Hospital_region_code: It is code given to the hospital region which is irrelevant to the Length of Stay.

Bed Grade: It is the grade given to the quality of the bed in ward it is also irrelevant to the length of stay.

patientid: It is the identity number or code given for the identification of the patient which is irrelevant to the length of stay.

City_Code_Patient: It is the city code and irrelevant to the length of stay of patients.

```
'''
as 'Hospital_region_code', 'Bed_Grade', 'patientid', 'City_Code_Patient' are irrelevant to the health on
length of stay of patients so lets drop these parameters from training and testing dataset to improve the performance of model (high accuracy)
by reducing the complexity
'''
